

Visit the Business monitoring and Planning Department of the General Directorate of Traffic

On 19 December 2017, the Department of Business Monitoring and Planning visited the operation rooms of the Roads Department of the General Directorate of Traffic within the framework of its objectives of health, safety and environment. The purpose of the visit is to identify the mechanism of operation of surveillance cameras (speed, safety belt, etc.) In case of non-compliance with the laws.

An explanation of the signal control mechanism, variable message boards, priority in opening intersections, traffic cameras, traffic counting cameras, red and red signal overflow cameras, scheduled speed, fixed and mobile traffic cameras and Point to Point cameras was provided. Awareness leaflets related to central control and sites used to control safety lane offenders were also distributed.
